Fuelfix FMS

Measure, Control & Conserve Fuel

Fuelfix Fuel Management System is ideal for real-time accurate fuel data access anywhere, anytime – to monitor, manage and report instantly. Automatic Tank Gauging (ATG) can easily be connected to these units.

Easy to Use, Easy to Set Up

The unit suits just about any fuel bowser or bulk flowmeter. It enables instant connectivity to control who has access to your fuel. Track your fuel usage in easy-to-read MS Excel reports, available directly from the system's website. Easy reporting for diesel rebate tracking. The package comes complete with 20 x vehicle keys.

Enhanced Security

Provision for fuel supply restrictions by volume, user and operating hours. Control access to fuel with the use of secure vehicle tags and driver PIN or tags.

Remote Access

All data is stored securely in the unit and can be automatically uploaded to the secure website after each transaction for monitoring. No registration or monthly ongoing fees for the standard website access.

Robust

Designed to deal with unstable power sources, such as generators, truck systems and environments with high levels of electrical noise. A glass-reinforced nylon enclosure ensures continuous operation in all conditions.

Local Support

Australian design and manufactured – supported locally from Adelaide.

Measure, Control & Conserve Fuel

Automatic Tank Gauging (ATG)

This technology enables you to check tank levels via your web browser or can easily be set to send regular level updates and alerts to your smartphone. Efficient stock control demands accurate monitoring of tank levels and Fuelfix Automatic Tank Gauging (ATG) makes this task a 'hands off' experience your people can tackle from anywhere.

A Complete Solution

When you combine the ATG with our Fuel Management System, you have a complete fuel management and reporting system in just one unit, to report, record, measure and alert about fuel use and levels.

Easy to Use, Easy to Set Up

The ATG system is a simple and reliable design for people who require a functionally accurate system for re-ordering and basic stock control. It is easy to set-up on site and suits a wide variety of tanks.

Access to Information, Anywhere, Anytime

Tank levels can be viewed on a display next to the tank, accessed online in real-time and can also be sent via SMS on demand or at a pre-set time of day.

Total Control

The ATG system has a low/high level alarm for each tank that can be set by the user. Densities can be changed by the user in case of product type changes. That means, you will never run out of fuel and can optimise fuel deliveries.
